Water Quality and Its Management Nov 29 2019 Selected Proceedings of the 1st International Specialised Conference on Water Quality and its Management, held in New Dehli, India, 2-6 March 1998. Water resources development should not only ensure water supply in the right quantity at the right time but also ensure that the water is of the right quality. While drinking water must meet stringent quality standards, water quality is also important for agricultural, industrial and other uses. Increasing pollution, urbanisation and industrialisation has lead to a growing threat to water quality in rivers and lakes. Groundwater quality can also be affected as a result of the use of agrochemicals, wastewater irrigation, and salinity and landfill leachate intrusion. Such problems are often most acute in developing countries where water is short to begin with. This was the subject matter of Water Quality and its Management. From over 200 original submissions, 67 were orally presented, many of direct and practical regional relevance. After peer review, a further selection was made, of high-quality papers of significant interest to the worldwide readership of Water Science & Technology. Twenty-four of these papers are included here, categorized into the six major sub-themes of the conference: Impact of Industry and Agriculture on Water Quality Surface Water Quality Management Groundwater Contamination Issues Drinking Water Quality Management Use of Low-quality Waters and Wastewaters Water Quality Improvement Methods, Techniques and Technologies

Writing a Research Paper in Political Science Feb 10 2021 Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience. Crafting the right research question, finding good sources, properly summarizing them, operationalizing concepts and designing good tests for their hypotheses, presenting and analyzing quantitative as well as qualitative data are all tough-going without a great deal of guidance and encouragement. Writing a Research Paper in Political Science breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. New to the Fourth Edition: A non-causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process. Updated

and more detailed discussions of plagiarism, paraphrases, "drop-ins," and "transcripts" help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of "fake news" and disinformation shows students how to evaluate and choose high quality sources, as well as how to protect oneself from being fooled by bad sources. Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for presentations in the classroom, at a conference, and beyond. A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it.
