Enzymatic Reaction Mechanisms Sep 03 2022 Books dealing with the mechanisms of enzymatic reactions were written a generation ago. They included volumes entitled Bioorganic Mechanisms, I and II by T.C. Bruice and S.J. Benkovic, published in 1965, the volume entitled Catalysis in Chemistry and Enzymology by W.P. Jencks in 1969, and the volume entitled Enzymatic Reaction Mechanisms by C.T. Walsh in 1979. The Walsh book was based on the course taught by W.P. Jencks and R.H. Abeles at Brandeis University in the 1960's and 1970's. By the late 1970's, much more could be included about the structures of enzymes and the kinetics and mechanisms of enzymatic reactions themselves, and less emphasis was placed on chemical models. Walsh's book was widely used in courses on enzymatic mechanisms for many years. Much has happened in the field of mechanistic enzymology in the past 15 to 20 years. Walsh's book is both out-of-date and out-of-focus in today's world of enzymatic mechanisms. There is no longer a single volume or a small collection of volumes to which students can be directed to obtain a clear understanding of the state of knowledge regarding the chemical mechanisms by which enzymes catalyze biological reactions. There is no single volume to which medicinal chemists and biotechnologists can refer on the subject of enzymatic mechanisms. Practitioners in the field have recognized a need for a new book on enzymatic mechanisms for more than ten years, and several, including Walsh, have considered undertaking to modernize Walsh's book. However, these good intentions have been abandoned for one reason or another. The great size of the knowledge base in mechanistic enzymology has been a deterrent. It seems too large a subject for a single author, and it is difficult for several authors to coordinate their work to mutual satisfaction. This text by Perry A. Frey and Adrian D. Hegeman accomplishes this feat, producing the long-awaited replacement for Walsh's classic text.

Chemical Reaction Networks Jun 19 2021 Over the last decade, increased attention to reaction dynamics, combined with the intensive application of computers in chemical studies, mathematical modeling of chemical processes, and mechanistic studies has brought graph theory to the forefront of research. It offers an advanced and powerful formalism for the description of chemical reactions and their intrinsic reaction mechanisms. Chemical Reaction Networks: A Graph-Theoretical Approach elegantly reviews and expands upon graph theory as applied to mechanistic theory, chemical kinetics, and catalysis. The authors explore various graph-theoretical approaches to canonical representation, numbering, and coding of elementary steps and chemical reaction mechanisms, the analysis of their topological structure, the complexity estimation, and classification of reaction mechanisms. They discuss topologically distinctive features of multiroute catalytic and noncatalytic and chain reactions involving metal complexes. With it's careful balance of clear language and mathematical rigor, the presentation of the authors' significant original work, and emphasis on practical applications and examples, Chemical Reaction Networks: A Graph Theoretical Approach is both an outstanding reference and valuable tool for chemical research.

Attitudes Towards Social Limits, Undersocialized Behavior, and Self-presentation in Young People Nov 05 2022 In this book a study is presented on the attitudes of 12- to 20-year-old youngsters towards social limits, imposed by their social and educational environment by means of laws, rules, values, norms or expectations. The study is part of a research programme on the course and treatment of juvenile delinquency, which started at the Rijksuniversiteit Groningen during the eighties. Young people's attitudes towards social limits are assessed by the 'Standard Reaction Instrument'. A critical incident technique is used to elicit young people's knowledge, behavioral intentions and motivations in ten hypothetical situations including social limits. The instrument was administered from youngsters in secondary schools and from same-aged detained youngsters who have committed at least one criminal offence which has been recorded by police or judicial authorities. The responses of both groups are compared in order to test the validity of the instrument. Further, the relationship is tested between the

youngsters' attitudes towards social limits and self-reported delinquent and aggressive behavior. Finally, a comparison is made between the responses of Flemish and Dutch youngsters. Starting point of the empirical study is a social psychological view on juvenile delinquency. In this view, which is based on the self-presentation paradigm developed by the sociologist Ervin Goffman and the early symbolic interactionists, juvenile delinquency is considered as a means of social communication towards significant others (parents, teachers, peers, society). Special attention is paid to the development, maintenance and management of social reputation by the juvenile delinquent.
