Heifetz May 19 2021 The violinist Jascha Heifetz (1901-1987) is considered among the most influential performers in history and still maintains a strong following among violinists around the world. Dario Sarlo contributes significantly to the growing field of analytical research into recordings and the history of performance style. Focussing on Heifetz and his under-acknowledged but extensive performing relationship with the Bach solo violin works (BWV 1001-1006), Sarlo examines one of the most successful performing musicians of the twentieth century

along with some of the most frequently performed works of the violin literature. The book proposes a comprehensive method for analysing and interpreting the legacies of prominent historical performers in the wider context of their particular performance traditions. The study outlines this research framework and addresses how it can be transferred to related studies of other performers. By building up a comprehensive understanding of multiple individual performance styles, it will become possible to gain deeper insight into how performance style develops over

It draws on numerous methods to examine what and how Heifetz played, why he played that way, and how that way of playing compares to other performers. The book offers much insight into the 'music industry' between 1915 and 1975, including touring, programming, audiences, popular and professional reception and recording. edition of *Gold Coins of the World* made its debut in 1958, it forever changed the way gold coins were collected, cataloged, traded, and priced. For the first time, one book provided a reliable guide for a subject which previously required an often expensive investment in multiple volumes of literature, some of it rare and antique, and much of it badly out-of-date. With the publication of this pioneering work, Robert Friedberg (1912-1963) established himself as an international icon in the field of numismatic literature. This book, and the 'Friedberg Numbering System'

he developed became then, and is still today, the internationally-recognized standard for systematically identifying any gold coin ever made. From just 384 pages in 1958, *Gold Coins of the World* has expanded to the extent that it now contains more than triple the information of its ancestor. It still stands alone as the first and only book to describe, catalog and price two millennia of gold, platinum, and palladium coin issues from across the globe. From the first coins of the ancient Greeks to the most recently-issued modern commemoratives, they are all here, an astonishing

clinical reference on all aspects of SLE, connective tissue diseases, and the antiphospholipid syndromes. Provides complete clinical coverage of every aspect of cutaneous and systemic lupus erythematosus, including definitions, pathogenesis, autoantibodies, clinical and laboratory features, management, prognosis, and patient education. Contains an up-to-date overview of significant advances in cellular, molecular, and genetic technologies, including genetic advancements in identifying at-risk patients. Offers an increased focus on

the clinical management of related disorders such as Sjogren's syndrome, scleroderma, polymyositis, and antiphospholipid syndrome (APS). Presents the knowledge and expertise of more international contributors to provide new global perspectives on manifestations, diagnosis, and treatment. Features a vibrant, full-color format, with graphs, algorithms, differential diagnosis comparisons, and more schematic diagrams throughout.

Mathematics of Two-Dimensional Turbulence Sep 30 2019 This book is dedicated to the mathematical study of two-dimensional statistical hydrodynamics and turbulence, described by the 2D Navier-Stokes system with a random force. The authors' main goal is to justify the

statistical properties of a fluid's velocity field $u(t,x)$ that physicists assume in their work. They rigorously prove that $u(t,x)$ converges, as time grows, to a statistical equilibrium, independent of initial data. They use this to study ergodic properties of $u(t,x)$ - proving, in particular, that observables $f(u(t, \cdot))$ satisfy the strong law of large numbers and central limit theorem. They also discuss the inviscid limit when viscosity goes to zero, normalising the force so that the energy of solutions stays constant, while their Reynolds numbers grow to infinity.

They show that then the statistical equilibria converge to invariant measures of the 2D Euler equation and study these measures. The methods apply to other nonlinear PDEs perturbed by random forces.
