examines how a child's psychology - thoughts, feelings, beliefs - affects his or her functioning and learning. In addition, the book addresses how a child's experiences are processed through individual personality, psychology, culture, environment and economic circumstances, and family dynamics. Using these psychological organizing principles, the book describes how to work most effectively with young patients with NVLD. It offers a new model and definition for understanding NVLD, emphasizing its core deficit of visual-spatial processing. In addition, this book addresses efforts to rename NVLD to developmental visual-spatial disorder (DVSD). It describes the 11 possible subtypes as including a primary deficit in visual-spatial processes and impairment in several additional functional domains, including executive functioning, social/emotional deficits, academic achievement, and motor coordination. The book highlights the need for psychologically minded treatment and provides specific intervention guidelines. It details how to conduct the intake process and create a treatment plan and team and offers practical suggestions for working with a patient's family members. In addition, the book addresses the importance of working with a consistent psychological theory, such as control mastery theory (CMT). It describes the Brooklyn Learning Center Model for treating NVLD and offers guidelines for interventions to support patients academically. The book provides a comprehensive approach to the neuropsychological assessment of NVLD as well as examples of visual-spatial, sensory perception, executive functioning, academics, social/emotional deficits and motor coordination interventions, and all forms used to gather information from patients. Key areas of coverage include: Definition of nonverbal learning disability (NVLD). The Future of Public Employee Retirement Systems Dec 14 2020 People covered by public pensions are often the subject of 'pension envy:' that is, their benefits might seem more generous and their contributions lower than those offered by the private sector. Yet this book points out that such judgments are often inaccurate, since civil servants hold jobs with few counterparts in private industry, such as firefighters, police, judges, and teachers. Often these are riskier, dirtier, and demand more loyalty and discretion than would be required of a more mobile labor force in the private sector. The debate challenges traditional ideas about how the public employee labor contract is structured and raises

questions about how such employees are attracted to the public sector, retained and motivated on the job, and retired, via an entire compensation package of wages and benefits. Authors explore aspects of these schemes, addressing the cost and valuation debate, along with the political economy of how public pension asset pools are perceived and managed, an increasingly important topic in times of global financial turmoil. The discussion also explores ways that public pensions can be strengthened in the US, Japan, Canada, and Germany. The volume captures a vigorous debate currently underway by academics, financial experts, regulators, and plan sponsors, all seeking to define a new future for public retirement systems. It will be of substantial interest to a wide range of readers, since public sector employees and their representatives will naturally find the comparisons and arguments over valuation of keen interest. Public pension administrators and policymakers seeking an explanation of what makes these plans so costly will gain a new understanding of how the arguments stack up. Private sector employers and plan sponsors can learn much from efforts to reform these retirement systems in states and countries around the world. Finally, investors and the taxpaying public more generally may be at risk to cover these long-term promises, so it behoves them to pay close attention to the financing and investment practices of these plans, along with their valuation. This volume represents an invaluable addition to the Pension Research Council / Oxford University Press series as it includes actuarial, economic, and financial perspectives making it useful for academics, retirement plan administrators, and public employees wishing to understand the challenges facing public pensions.

Adaptive Hypermedia and Adaptive Web-Based Systems Sep 30 2019 Adaptive Hypermedia has emerged as an important area of both academic and deployed research. It encompasses a broad range of research that will enable personalized, adaptive hypermedia systems to play an even more effective role in people's lives. The Web has enabled the widespread use of many person- ized systems, such as recommenders, personalized filters and retrieval systems, e-learning systems and various forms of collaborative systems. Such systems have been widely deployed in diverse domains such as e-Commerce, e-Health, e-Government, digital libraries, personalized travel planning as well as tourist and cultural heritage services. They are particularly promising for users with special needs. The exciting possibilities of such deployed adaptive hypermedia systems rely on research progress in a broad range of areas such as: user profiling and modeling; acquisition, updating and management of user models; group modeling and community-based profiling; recommender systems and recommendation strategies; data mining for personalization.

the Semantic Web; adaptive multimedia content authoring and delivery; ubiquitous computing environments and Smart Spaces; personalization for the plethora of mobile devices, such as PDAs, mobile phones and other hand-held devices; and pragmatics such as privacy, trust and security. Empirical studies of adaptive hypermedia and Web systems are also critical to informing future directions. The Adaptive Hypermedia conferences have become the major forums for the scientific exchange and presentation of research results on adaptive hypermedia and adaptive Web-based systems.
