Introductory Mining Engineering Jan 30 2020 An introductory text and reference on mining engineering highlighting the latest in mining technology Introductory Mining Engineering outlines the role of the mining engineer throughout the life of a mine, including prospecting for the deposit, determining the site's value, developing the mine, extracting the mineral values, and reclaiming the land afterward. This Second Edition is written with a focus on sustainability-managing land to meet the

economic and environmental needs of the present while enhancing its ability to also meet the needs of future generations. Coverage includes aboveground and underground methods of mining for a wide range of substances, including metals, nonmetals, and fuels. Completely up to date, this book presents the latest information on such technologies as remote sensing, GPS, geophysical surveying, and mineral deposit evaluation, as well as continuous integrated mining operations and autonomous trucks. Also included is new information on landscape restoration, regional planning, wetlands protection, subsidence mitigation, and much more. New chapters include coverage of: * Environmental responsibilities * Regulations * Health and safety issues Generously supplemented with more than 200 photographs, drawings, and tables, *Introductory Mining Engineering, Second Edition* is an indispensable book for mining engineering students and a comprehensive reference for professionals.

South Yorkshire Mining Disasters Oct 28 2019 In the period that we now call the Industrial Revolution mining disasters wrecked the lives of thousands of South Yorkshire families and devastated entire communities. The Husker pit flooding of 1838 in which 26 young girls and boys were killed shocked Victorian society and was a significant factor in the 1842 Report on Employment of Women and Children in Mines; but earlier, long forgotten disasters are also explored. The Barnsley area was particularly hard-hit during the middle decades of the century with major mining accidents, usually great explosions of firedamp occurring, for example, at Lundhill Colliery (189 men and boys killed); Oaks (361 fatalities, Britain's worst pit disaster) and Swaithes Main (143 dead). Scenes of grief, mourning and remarkable heroism provided spectacular copy for Victorian newspapers and magazines such as *The Illustrated London News*, focusing on the very uncertain and dangerous life of the miner. Despite the importance and widespread occurrence of South Yorkshire mining disasters, which also included dreadful winding accidents and gas emissions, their story has never been told in a single volume.

Dissenting Spirit Nov 02 2022 Thomas Weaver was an accomplished Irish engineer and geologist who found success at a young age in the early nineteenth century. Known as a strict if considerate manager of mines in Ireland, he also participated in suppressing the 1798 Rebellion in Wicklow. He carried out geological mapping in Ireland, Mexico, Great Britain and North America. His story sheds light on industrial and social conditions in pre-Famine Ireland and elsewhere, as geology was coming of age as a scientific discipline. Weaver, like many people today, took issue with emerging new mindsets, and he was eventually marginalized. This book will appeal to those interested in the science and industry of the early nineteenth century, and to students of the philosophy and history of science.

SME Mining Engineering Handbook, Third Edition Dec 31 2019 This third edition of the SME Mining Engineering Handbook reaffirms its international reputation as "the handbook of choice" for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content, representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term--why such changes are inevitable, what this will mean in terms of challenges, and how they could be managed Explaining the mechanics associated with the multifaceted world of mine and mineral economics, from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash-flow issues associated with mine planning at a mature operation Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving optimization, or process dewatering methods Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking, whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner, or cast blasting at a surface coal operation Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond, and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders

Amendments to Alaska Native Claims Settlement Act Mar 26 2022

Handbook of Operations Research in Natural Resources Aug 26 2019 Here is the first systematic handbook treatment of quantitative modeling natural resource problems, their allocated efficient use, and societal and economic impact. Andr é s Weintraub is the very top person in Natural Resource research. He has selected co-editors who are at the top of the sub-fields in natural resources: agriculture, fisheries, forestry, and mining. The book covers these areas with contributions from researchers on, among others, modeling natural resource problems, quantifying data, and developing algorithms.
