Sisterhood May 10 2021 'A powerful story' Sunday Post 'Two gripping heroines' Choice 'Grey investigates how secrets from the past continue to warp the present' The Sunday Times TWO SISTERS, ONE DEVASTATING SECRET It is 1944 in war-battered London. Freya and Shona are identical twins, close despite their different characters. Freya is a newly qualified doctor treating the injured in an East End hospital, while Shona has been recruited by the SOE. The sisters are so physically alike that they can fool people into thinking that one is the other. It's a game they've played since childhood. But when Shona persuades her twin to swap roles to meet her Polish lover, he is angered at being tricked. Then Shona proposes a far more dangerous swapping of roles. At first Freya refuses but finally she agrees, with consequences that threaten not only the happiness but the lives of both sisters. Forty-five years later in November 1989 Freya, now aged 69, is watching television with her daughter Kirsty. Freya is gripped as she witnesses crowds of Berliners attempting to knock down their hated Wall. This sight stirs memories of her own and her sister's war, especially the tragedy of the Warsaw Uprising - memories that she has never shared with anyone. Even if she wanted to reveal them now, she can't. She's suffering from a brain tumour and is unable to speak although her reason is unimpaired. And this is what she's thinking: if they succeed in knocking down the Wall, what secrets will come tumbling through? If her own were revealed, it would be devastating for all those close to her, especially her daughter, Kirsty.

One of the historical battles was fought on March 6, 1836, at the Alamo, a crumbling fort defended by 154 men. Stand with the defenders in what became a symbol of Texan courage and sacrifice in this impressive graphic novel. Maps, timelines, glossaries, and indexes make these titles an exciting addition to classroom discussion.

Report of the Bloody Sunday Inquiry (Hc) Nov 04 2020 On 29th January 1998 the House of Commons resolved that it was expedient that a tribunal be established for inquiring into a definite matter of urgent public importance, namely "the events on Sunday, 30 January 1972 which led to loss of life in connection with the procession in Londonderry on that day, taking account of any new information relevant to events on that day." On 2nd February 1998 the House of Lords also passed this resolution. With the exception of the last 12 words, these terms of reference are virtually identical to those for a previous Inquiry held by Lord Widgery (then the Lord Chief Justice) in 1972. Both inquiries were conducted under the provisions of the Tribunals of Inquiry (Evidence) Act 1921. In his statement to the House of Commons on 29th January 1998 the Prime Minister (The Rt Hon Tony Blair MP) said that the timescale within which Lord Widgery produced his report meant that he was not able to consider all the evidence that might have been available. He added that since that report much new material had come to light about the events of the day. In those circumstances, he announced: "We believe that the weight of material now available is such that the events require re-examination. We believe that the only course that will lead to public confidence in the results of any further investigation is to set up a full-scale judicial inquiry into Bloody Sunday." The Prime Minister made clear that the Inquiry should be allowed the time necessary to cover thoroughly and completely all the evidence now available. The collection, analysis, hearing and consideration of this evidence (which is voluminous) have necessarily required a substantial period of time. The Tribunal originally consisted of The Rt Hon the Lord Saville of Newdigate, a Lord of Appeal in Ordinary, The Hon William Hoyt OC, formerly the Chief Justice of New Brunswick, Canada, and The Rt Hon Sir Edward Somers, formerly a member of the New Zealand Court of Appeal. Before the Tribunal began hearing oral evidence, Sir Edward Somers retired through ill health. The Hon John Toohey AC, formerly a Justice of the High Court of Australia, took his place. Lord Saville acted throughout as the Chairman of the Inquiry.

Essays in Conveyancing and Property Law in Honour of Professor Robert Rennie Jan 06 2021 Professor Robert Rennie has been one of the most influential voices in Scots private law over the past thirty years. Highly respected as both an academic and a practitioner, his contribution to the development of property law and practice has been substantial and unique. This volume celebrates his retirement from the Chair of Conveyancing at the University of Glasgow in 2014 with a selection of essays written by his peers and colleagues from the judiciary, academia and legal practice. Each chapter covers a topic of particular interest to Professor Rennie during his career, from the historical development of property law rules through to the latest developments in conveyancing practice and the evolution of the rules of professional negligence. Although primarily Scottish in focus, the contributions will have much of interest to lawyers in any jurisdiction struggling with similar practical problems, particularly those with similar legal roots including the Netherlands and South Africa. As a whole, the collection is highly recommended to students, practitioners and academics.

Boat Mechanical Systems Handbook Oct 23 2019 The First Ever Guide for Optimizing Boat Systems This guide is invaluable for anyone designing or installing mechanical systems on a new boat, retrofitting an existing boat, or evaluating a boat's operating condition. Writing for designers, builders, owners, buyers, mechanics, surveyors, and insurers of sailboats, powerboats, and commercial vessels, Dave Gerr provides design and installation guidance for each major mechanical system plus pragmatic guidelines and real-world interpretations of American Boat & Yacht Council (ABYC) and European standards. No marine professional or serious boater should be without Boat Mechanical Systems Handbook. "Dave Gerr has a knack for breaking down the more esoteric concepts of naval architecture into language that's easily understood by the layman, which is one of the reasons why his writing often appears in the pages of SAIL. Another reason is his deep practical knowledge of the intricacies and subtleties of boat construction and systems, and the way they relate to each other. The subhead of Boat Mechanical Systems Handbook says it all--how to design, install and recognize proper systems in boats: Light reading this isn't, but if you're about to refit your boat or upgrade outdated systems, perhaps with some serious voyaging in mind, this book is a worthwhile investment. This is a unisex book, for both powerboaters and sailors; there's no mention of sailing rigs, but every other conceivable system is covered more or less exhaustively." --PETER NIELSEN, SAIL, November 2009 Praise for Dave Gerr's previous books: The Elements of Boat Strength: "Certain books, because of their thoroughness, tend to become industry standards; such is the case with The Elements of Boat Strength." --Ocean Navigator Propeller Handbook: "The best layman's guide we've ever read." --Practical Sailor "Gerr made a complicated topic understandable and put it into a handbook that is easy to use." --WoodenBoat The Nature of Boats: "Offers, in a disarmingly charming fashion, a look at all aspects of what makes a boat work. If you are not nautically obsessed prior to reading this book, you most certainly will be afterward." --Sailing

Atlas of Cilia Bioengineering and Biocomputing May 30 2020 Cilia are microscopic finger-like cell-surface organelles possessed by a great many eukaryotic organisms, including humans, whose purposes include generating local fluid movements via rhythmic whip-like beating and environmental sensing. Despite intense research efforts since their discovery by van Leeuwenhoek in the 1670's, several key questions regarding ciliary functions, experimental manipulation and in silico imitation remain unanswered. Major justifications for cilia research lie in their involvement in various forms of human disease (ciliopathies) and their ability to instantiate decentralized, asynchronous sensorial-actuation of adjacent matter through modulation of beating characteristics. Further elucidation of these characteristics, which is a problem requiring the combined expertise of mathematicians, computer scientists, engineers and life scientists, will lead to novel biomedical therapies, creation of 'smart' actuating surfaces for microfluidics/lab-on-chip applications and a greater understanding of fluid mechanics in real-world scenarios. This lavishly-illustrated anthology presents recent advances in the fields of ciliary investigation, manipulation, emulation, mimesis and modelling from key researchers in their fields: its goal is to explain the state-of-the-art in cilia bioengineering and bio-computation in a uniquely creative, accessible manner, towards encouraging further transdisciplinary work in the field as well as educating a broad spectrum of scientists and lay people. The volume is split into three distinct but interwoven themes: Biology: Biological preliminaries for the study of cilia; the state-of-the-art in genetic engineering of ciliated cells for biomedical purposes; reprogramming of cilia dynamics in live cells; Engineering: Creation of macro cilia robots for object sorting applications; pneumatic cilia for the optimization of fluid motion; electrostatic, magnetic and MEMS cilia for microfluidic mixing; reviews in artificial cilia fabrication, actuation and flow induction methods; Numerical and computational modelling. Analyses of thin film cilia for 'lab on chip' microfluidic mixing applications; modelling of gel-based artificial cilia towards simulating dynamic behaviors of responsive cilia layers in complex fluids across a wide range of potential applications.

Greater Cincinnati Religious Peacemakers Feb 25 2020 Throughout human history, wars and violence have often been waged in the name of religions and in the name of diverging religious beliefs and belonging. Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.
