Green Agent User's Guide Jan 28 2020 "This Note is a primer on the use of Green Agent, the RAND Strategy Assessment Center's model of nonsuperpower political-military behavior in crisis and conflict. Green is a rule-based decision model written in the RAND-ABEL programming language; it is capable of simulating the behavior of more than one hundred national actors. It takes as inputs a variety of assumptions regarding the characteristics of each country to be modeled, and produces as outputs a set of decisions which, among other things, controls the actions of each country's military forces and governs access to its territory. The Note describes Green briefly, then details the parameters and variables whose settings and values constitute its inputs and outputs. It also discusses how to think about and use Green within the context of the RAND Strategy Assessment System (RSAS), and describes how to use various RSAS tools to access information about Green's activities. This Note is not intended as a reference manual for the model; N-2363-1 is available."--Rand abstracts

Applying Knowledge Management Jun 25 2022 The wholesale capture and distribution of knowledge over the last thirty years has created an unprecedented need for organizations to manage their knowledge assets. Knowledge Management (KM) addresses this need by helping an organization to leverage its information resources and knowledge assets by "remembering" and applying its experience. KM involves the acquisition, storage, retrieval, application, generation, and review of the knowledge assets of an organization in a controlled way. Today, organizations are applying KM throughout their systems, from information management to marketing to human resources. *Applying Knowledge Management: Techniques for Building Corporate Memories* examines why case-based reasoning (CBR) is so well suited for KM. CBR can be used to adapt solutions originally designed to solve problems in the past, to address new problems faced by the organization. This book clearly demonstrates how CBR can be successfully applied to KM problems by presenting several in-depth case-studies. Ian Watson, a well-known researcher in case-based reasoning and author of the introductory book, *Applying CBR: Techniques for Enterprise Systems* has written this book specifically for IT managers and knowledge management system developers. * Provides 7 real-world applications of knowledge management systems that use case-based reasoning techniques. * Presents the technical information needed to implement a knowledge management system. * Offers insights into the development of commercial KM CBR applications * Includes information on CBR software vendors, CBR consultants and value added resellers

When left unchecked, this internal chatter can wreak havoc on their health and life. *The Kid's User Guide to a Human Life Book One: An Open Mind* will share how easy it is to be mindful of habitual mind chatter and how doing so creates a spacious, open quality of mind and life. Kids will learn to question what their mind is saying about themselves and others and how to hold lovingly what they find in the clearness of their own open mind. There is no better way to throw open the doors and adventure confidently and joyously into a happy and healthy life!
