**Foundation Engineering Handbook** Aug 07 2020 More than ten years have passed since the first edition was published. During that period there have been a substantial number of changes in geotechnical engineering, especially in the applications of foundation engineering. As the world population increases, more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used. Such areas include problematic soil regions, mining subsidence areas, and sanitary landfills. To overcome the problems associated with these natural or man-made soil deposits, new and improved methods of analysis, design, and implementation are needed in foundation construction. As society develops and living standards rise, tall buildings, transportation facilities, and industrial complexes are increasingly being built. Because of the heavy design loads and the complicated environments, the traditional design concepts, construction materials, methods, and equipment also need improvement. Further, recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost-saving methods for foundation design and construction.

**Environmental Information in Instructions for Use of Consumer Products** Nov 21 2021 The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy, IPP. Accordingly, consumers should have easy access to understandable, relevant and credible environmental information. Information about product characteristics is available in different forms and sources, but in many cases, relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on, examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and 'eco-development' of instructions for use.
