**Information Warfare** Aug 20 2019 This book provides a systems-level introduction of the means by which information technology is changing conflict and warfare. This book is for war fighters, as well as the policy makers, commanders, and systems engineers who will implement the transition for strategy and concept to system design and implementation.

**Continuum Theory of the Mechanics of Fibre-Reinforced Composites** Oct 14 2021

Mechanical Metallurgy May 29 2020

**Unemployment in Europe** Oct 22 2019 Such action cannot be limited to employment policies - positive fiscal, monetary, exchange rate, industrial and regional policies are also needed.

Spectral Methods in MATLAB Jul 23 2022 Mathematics of Computing -- Numerical Analysis.

**Motor Vehicle Body Repairer (metal and Paint).** May 09 2021 This analysis is directed at the broad range of activities performed by the motor vehicle body repairer. The analysis identifies tasks & sub-tasks performed, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, work practices & procedures, frame & structural components, outer body panels, glass, mechanical components, electrical system, restraint systems, interior trim & upholstery, refinishing, and detailing. For each task, the document outlines the element of skill and knowledge needed to perform the task adequately, identifies any trends that affect the task, lists tools and equipment required for the task, and indicates whether the task has been validated by each province & territory. The appendix includes a list of tools & equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole).

**Computational Inelasticity** Nov 03 2020 A description of the theoretical foundations of inelasticity, its numerical formulation and implementation, constituting a representative sample of state-of-the-art methodology currently used in inelastic calculations. Among the numerous topics covered are small deformation plasticity and viscoplasticity, convex optimisation theory, integration algorithms for the constitutive equation of plasticity and viscoplasticity, the variational setting of boundary value problems and discretization by finite element methods. Also addressed are the generalisation of the theory to non-smooth yield surface, mathematical numerical analysis issues of general return mapping algorithms, the generalisation to finite-strain inelasticity theory, objective integration algorithms for rate constitutive equations, the theory of hyperelastic-based plasticity models and small and large deformation viscoelasticity. Of great interest to researchers and graduate students in various branches of engineering, especially civil, aeronautical and mechanical, and applied mathematics.

Rules and Regulations (revised) Feb 06 2021

**Standard International Trade Classification** Dec 24 2019

*Mechanical Testing of Metals. Ductility Testing. Compression Test for Porous and Cellular Metals* Apr 08 2021 Ductility testing, Mechanical testing, Metals, Compression testing, Porous materials, Cellular materials

**Elastic Stability of Circular Cylindrical Shells** Aug 12 2021 The object of this book is to clarify the whole aspect of the

basic problems concerning the elastic stability of circular cylindrical shells under typical loading conditions. The book deals with buckling, postbuckling and initial postbuckling problems under one of the three fundamental loads, that is, torsion, pressure and compression. The emphases are placed on the accurate analysis and comprehensive numerical results for the buckling problem, experimental verification of the theoretical analysis for the postbuckling problem and clarification of the range of applicability of the perturbation method for the analysis of initial postbuckling behaviors and imperfection sensitivity. The problems under typical combined loads as well as the influence of the contained liquid are also clarified.

*Dislocations, Mesoscale Simulations and Plastic Flow* Jul 11 2021 Dislocation dynamics simulations are becoming accessible to a wide range of users. This book presents to students and researchers in materials science and mechanical engineering a comprehensive coverage of the physical body of knowledge on which they are based.

On the Stability of Elastic Equilibrium May 21 2022

Security Owner's Stock Guide Jun 22 2022

**A Continent Moving West?** Jul 31 2020 Dit boek beschrijft de toename van migratie uit Oost-europese landen in de periode van 2004-2007, na toetreding tot de EU. Het bevat nieuwe empirische 'casestudies' van migratiepatronen, zowel gebaseerd op veldwerk als op de analyse van bestaande statistieken.

**A Life-Course Perspective on Migration and Integration** Jul 19 2019 Over the last four decades the sociological life course approach with its focus on the interplay of structure and agency over time life course perspective has become an important research perspective in the social sciences. Yet, while it has successfully been applied to almost all fields of social inquiry it is much less used in research studying migrant populations and their integration patterns. This is puzzling since understanding immigrants' integration requires just the kind of dynamic research approach this approach puts forward: any integration theory actually refers to life course processes. This volume shows fruitful cross-linkages between the two research traditions. A range of studies are presented that all apply sociological life course concepts to research on migrants and migrant groups in Europe. The book is organized thematically, indicating different important domains in the life course. Using a wide variety of methodological approaches, it covers both quantitative studies based on population census data and survey material as well as qualitative studies based on interviews. Attention is paid to the life courses of those who migrated themselves as well as their offspring. The studies cover different European countries, relating to one national context or a particular local setting in a city as well as cross-country comparisons. Overall the book shows that applying the sociological life course approach to migration and integration research may advance our understanding of immigrant settlement patterns

as well as further develop the life course perspective

**Identity and Foreign Policy** Mar 07 2021 Baltic-Russian relations have been complicated and tense since the collapse of the USSR and the restoration of Estonian, Latvian and Lithuanian independence. Although Baltic accession to the European Union (EU) has created a new international context for interstate relations in the region, enlargement did not bring about the much hoped for improvement in Baltic-Russian relations. This case-study-rich volume examines links between identity, memory politics and foreign policy. It analyzes and explains developments in Baltic-Russian relations after both NATO and EU enlargement, focusing on the incompatibility of Baltic and Russian post-Soviet national identity constructions and the manifestations of this underlying antagonism in bilateral relations and on the broader European and international arena. Built on the constructivist perspective in international relations, this volume provides a coherent and illuminating account of the dynamics of Baltic-Russian relations after NATO and EU enlargement. Combining policy-relevant analysis with theoretical insights, it will meet the needs of academics and students of foreign policy, EU external relations and international relations more generally.

**Unified Constitutive Laws of Plastic Deformation** Jun 29 2020 High-technology industries using plastic deformation demand soundly-based economical decisions in manufacturing design and product testing, and the unified constitutive laws of plastic deformation give researchers a guideline to use in making these decisions. This book provides extensive guidance in low cost manufacturing without the loss of product quality. Each highly detailed chapter of Unified Constitutive Laws of Plastic Deformation focuses on a distinct set of defining equations. Topics covered include anisotropic and viscoplastic flow, and the overall kinetics and thermodynamics of deformation. This important book deals with a prime topic in materials science and engineering, and will be of great use to both researchers and graduate students. Describes the theory and applications of the constitutive law of plastic deformation for materials testing Examines the constitutive law of plastic deformation as it applies to process and product design Includes a program on disk for the determination and development of the constitutive law of plastic deformation Considers economical design and testing methods

**Games and Learning Alliance** Nov 22 2019 This book constitutes the refereed proceedings of the 5th International Conference on Games and Learning Alliance, GALA 2016, held in Utrecht, The Netherlands, in December 2016. The 27 revised regular papers presented together with 14 poster papers were carefully reviewed and selected from 55 submissions. The papers cover topics such as games and sustainability; games for math and programming; games and health; games and soft skills; games and management; games and learning; game development and assessment; and mobile games.

**Self-Efficacy in Instructional Technology Contexts** Sep 20 2019 This edited volume contains reports of current research, and literature reviews of research, involving self-efficacy in various instructional technology contexts. The chapters represent international perspectives across the broad areas of K- 12 education, higher education, teacher self-efficacy, and learner self-efficacy to capture a diverse cross section of research on these topics. The book includes reviews of existing literature and reports of new research, thus creating a comprehensive resource for researchers and designers interested in this general topic. The book is especially relevant to students and researchers in educational technology, instructional technology, instructional design, learning sciences, and educational psychology.

**Polynomial Approximation of Differential Equations** Jun 17 2019 This book is devoted to the analysis of approximate solution techniques for differential equations, based on classical orthogonal polynomials. These techniques are popularly known as spectral methods. In the last few decades, there has been a growing interest in this subject. As a matter of fact, spectral methods provide a competitive alternative to other standard approximation techniques, for a large variety of problems. Initial applications were concerned with the investigation of periodic solutions of boundary value problems using trigonometric polynomials. Subsequently, the analysis was extended to algebraic polynomials. Expansions in orthogonal basis functions were preferred, due to their high accuracy and flexibility in computations. The aim of this book is to present a preliminary mathematical background for beginners who wish to study and perform numerical experiments, or who wish to improve their skill in order to tackle more specific applications. In addition, it furnishes a comprehensive collection of basic formulas and theorems that are useful for implementations at any level of complexity. We tried to maintain an elementary exposition so that no experience in functional analysis is required.

*Dislocation Dynamics* Jan 05 2021

**Spectral Methods in Fluid Dynamics** Nov 15 2021 This is a book about spectral methods for partial differential equations: when to use them, how to implement them, and what can be learned from their of spectral methods has evolved rigorous theory. The computational side vigorously since the early 1970s, especially in computationally intensive of the more spectacular applications are applications in fluid dynamics. Some of the power of these discussed here, first in general terms as examples of the methods have been methods and later in great detail after the specifics covered. This book pays special attention to those algorithmic details which are essential to successful implementation of spectral methods. The focus is on algorithms for fluid dynamical problems in transition, turbulence, and aero dynamics. This book does not address specific applications in meteorology, partly because of the lack of experience of the authors in this field and partly because of the

coverage provided by Haltiner and Williams (1980). The success of spectral methods in practical computations has led to an increasing interest in their theoretical aspects, especially since the mid-1970s. Although the theory does not yet cover the complete spectrum of applications, the analytical techniques which have been developed in recent years have facilitated the examination of an increasing number of problems of practical interest. In this book we present a unified theory of the mathematical analysis of spectral methods and apply it to many of the algorithms in current use.

*Persuasive Technology - Persuasive, Motivating, Empowering Videogames* Jun 10 2021 This book constitutes the refereed proceedings of the 9th International Conference on Persuasive Technology, PERSUASIVE 2014, held in Padua, Italy, in May 2014. The 27 revised full papers and 12 revised short papers presented were carefully reviewed and selected from 58 submissions. In addition to the themes of persuasive technology dealt with in the previous editions of the conference, this edition highlighted a special theme, i.e. persuasive, motivating, empowering videogames.

**The Emigrant Communities of Latvia** Oct 26 2022 This open access volume examines experiences of contemporary Latvian migrants, thereby focusing on reasons for emigration, processes of integration in their host countries, and – in the case of return migration - re-integration in their home country. In the context of European migration, the book describes the case of Latvia, which is interesting due to the multiple waves of excessive emigration, continuously high migration potential among European Union member states, and diverse migrant characteristics. It provides a fascinating insight into the social and psychological aspects linked to migration in a comparative context. The data in this volume is rich in providing individual level perspectives of contemporary Latvian migrants by addressing issues such as emigrants' economic, social and cultural inclusion in the host country, ties with the home country and culture, interaction with public authorities both in the host and home country, political views, and perspectives on the permanent settlement in migration or return. Through topics such as assimilation of children, relationships between emigrants representing different emigration waves, the complex identities and attachments of minority emigrants, and the role of culture and media in identity formation and presentation, this book addresses topics that any contemporary emigrant community is faced with.

Health at a Glance 2019 OECD Indicators Oct 02 2020 Health at a Glance compares key indicators for population health and health system performance across OECD members, candidate and partner countries. It highlights how countries differ in terms of the health status and health-seeking behaviour of their citizens; access to and quality of health care; and the resources available for health. Analysis is based on the latest comparable data across 80 indicators, with data coming from official national statistics, unless otherwise stated.

*Principles Of Unit Operations, 2Nd Ed* Sep 25 2022 Unit Operations in Chemical Engineering Part I Stage Operations· Mass Transfer Operations· Phase Relations· Equilibrium Stage Calculations· Countercurrent Multistage Operations· Countercurrent Multistage Operations with Reflux· Simplified Calculation Methods· Multicomponent State Operations· Part II Molecular and Turbulent Transport · Molecular Transport Mechanism· Differential Mass, Heat, and Momentum Balances· Equations of Change· Turbulent-Transport Mechanism· Fundamentals of Transfer Mechanisms· Interphase Transfer Part III Applications to Equipment Design · Heat Transfer· Mass Transfer· Simultaneous Heat and Mass Transfer--Humidification· Simultaneous Heat and Mass Transfer--Drying · Simultaneous Heat and Mass Transfer--Evaporation and Crystallization· The Energy Balance in Flow Systems· Fluid Motive Devices· Particulate Solids· Flow and Separation through Fluid Mechanics

**Poly-, Quasi- and Rank-One Convexity in Applied Mechanics** Jan 17 2022 Generalized convexity conditions play a major role in many modern mechanical applications. They serve as the basis for existence proofs and allow for the design of advanced algorithms. Moreover, understanding these convexity conditions helps in deriving reliable mechanical models. The book summarizes the well established as well as the newest results in the field of poly-, quasi and rank-one convexity.

Special emphasis is put on the construction of anisotropic polyconvex energy functions with applications to biomechanics and thin shells. In addition, phase transitions with interfacial energy and the relaxation of nematic elastomers are discussed.

**Measuring and Monitoring Immigrant Integration in Europe** Jan 25 2020 Europe is trying to streamline its policy on the integration of immigrants and ethnic minorities. The information available on integration in the different countries is still very variable in its extent and quality. In this report, authors from sixteen European countries describe how integration is approached in their country, what the integration objectives of their government are, where the problems lie, and what the implications of this are for monitoring the process of integration over time in their country.

**StratEast Westernization Index 2020** Aug 24 2022 The StratEast Westernization Index 2020 assesses the processes of adherence to the Western values in post-Soviet countries outside of Russia across five dimensions - political, legal, economic, cultural, and lifestyle. The second edition of this Index, released two years after the first one, retains its unique features:- it is the only report to analyze the 14 countries of the Post-Soviet, Non-Russian region (PSNR) region as a whole;- it measures each country's wholesale integration into the Western world across many sectors;- it is prepared for the West by experts from the region. However, the present edition of the Index has a fundamentally different quality: it now reveals not only a static but also a dynamic picture of Westernization in the post-Soviet countries outside of Russia. The second edition

shows trends in political, economic, and legal Westernization, and by extension, the effectiveness of efforts by Western institutions operating in the region. The Index is a useful tool for public institutes, both in the Post-Soviet, Not-Russian (PSNR) region itself, and in the West.

**The Art of the Mountain Banjo** Apr 20 2022 A complete survey of traditional banjo styles complete with tunings, playing tips, and the author's deft drawings. Progresses from easy tunes for the beginner to more difficult pieces. The styles include up-picking or Pete Seeger's basic strum; two-finger picking; three-finger picking; and what had variously been called frailing, clawhammer, knocking, rapping, overhand, fram-style, flayin' hand, and other Appalachian names, here called down-picking. Audio download available online

Globalisation, Migration, and the Future of Europe Dec 04 2020 Showcasing an original, interdisciplinary approach, this text examines the effect of migration on the domestic politics of individual states and how they are eroding the distinctions between the domestic and foreign policy, the 'inside' and 'outside' components of politics and law. During the twentieth century the context in which migrants negotiate their integration within legal, social, cultural, economic and political spaces changed significantly. Drawing upon varied perspectives from the US, UK, France, Germany, Switzerland, Russia and Italy among others, this work develops a comprehensive understanding of the impact migratory networks are having on European societies. It investigates the strategies of integration or discrimination which are developed in Europe by state institutions, legal codes, political movements and even immigrant communities themselves, when confronted with the growing influence of migratory networks. The result is a highly topical exploration of the political and legal dimensions of migration in the EU, that develops new approaches to the issue of social integration and the exclusion of migrants and migrant communities. Globalization, Migration, and the Future of Europe will be of interest to students and scholars of migration, European studies, globalization and International Law.

**Di Fiore's Atlas of Histology with Functional Correlations** Feb 18 2022 Since its first appearance in 1957, the Atlas has been regarded as the expert in the field of histology. The 7th edition reflects a new integrated approach to histology, presenting structure and is completely updated, rewritten, revised and expanded by Dr Eroschenko. 17 new colour drawings and clear labels have replaced older figures and functional correlations have been introduced. The book combines morphology with function.

An Introduction to Ethics Feb 24 2020 This book examines the central questions of ethics through a study of the great ethical works of Western philosophy.

**A Practical Guide to Pseudospectral Methods** Dec 16 2021 This book explains how, when and why the pseudospectral approach works.

**An Introduction to Metal Matrix Composites** Mar 19 2022 Metal matrix composites constitute a new class of materials, now starting to make a major industrial impact in fields as diverse as aerospace, automotives and electronics. This book gives a comprehensive, integrated coverage of these materials, including the background to analytical-, experimental-, production and application-oriented aspects. Clear pictorial descriptions are given of the basic principles governing various properties and characteristics; these encompass mechanical, thermal, electrical, environmental and wear behaviour. Coverage also extends to material processing and component fabrication aspects and to a survey of commercial usage. This book is aimed primarily at scientists, engineers, production managers and all those involved in research on new materials in general, and metal matrix composites in particular, but may also be suitable for use as a text in beginning graduate and advanced undergraduate courses.

Robert Ludlum's (TM) The Utopia Experiment Sep 01 2020 With U.S. intelligence agencies wracked by internal power struggles and paralyzed by bureaucracy, the president has been forced to establish his own clandestine group--Covert-One. It's activated only as a last resort, when the threat is on a global scale and time is running out. The Utopia Experiment When Dresner Industries unveils the Merge, a device that is destined to revolutionize the world and make the personal computer and smartphone obsolete, Covert-One operative Colonel Jon Smith is assigned to assess its military potential. He discovers that enhanced vision, real-time battlefield displays, unbreakable security, and near-perfect marksmanship are only the beginning of a technology that will change the face of warfare forever--and one that must be kept out of the hands of America's enemies at all costs. Meanwhile, in the mountains of Afghanistan, CIA operative Randi Russell encounters an entire village of murdered Afghans--all equipped with enhanced Merge technology that even the Agency didn't know existed. As Smith and Russell delve into the circumstances surrounding the Afghans' deaths, they're quickly blocked by someone who seems to have access to the highest levels of the military--a person that even the president knows nothing about. Is the Merge really as secure as its creator claims? And what secrets about its development is the Pentagon so desperate to hide? Smith and Russell are determined to learn the truth. But they may pay for it with their lives . . .

*Teaching English Grammar to Speakers of Other Languages* Apr 27 2020 This practical and research-based introduction to current and effective English grammar instruction gives pre-service and in-service teachers and teacher educators a strong foundation for teaching second language grammar and helps them develop their professional knowledge and skills. Written

in a highly readable style for an international audience, it provides a thorough and rounded overview of the principles, strategies, techniques, and applications currently dominant in teaching L2 grammar in a range of instructional settings around the world. Chapter authors are world-class authorities in grammar and grammar teaching and learning. All chapters are based on theoretical frameworks and/or research foundations with a strong emphasis on practical applications and implications for classroom teaching, and highlight teaching methods, key concepts, and terminology associated with grammar instruction. Illuminating the options and choices in grammar teaching from a contemporary perspective, *Teaching English Grammar to Speakers of Other Languages* is ideal as key text for students in undergraduate and graduate MA-TESOL programs and as a resource for practicing ESL/EFL teachers, teacher educators, and teaching faculty.

*Forced Underground* Sep 13 2021

*Educational Psychology and the Internet* Mar 27 2020 The first comprehensive, research-based textbook on Internet-infused education, *Educational Psychology and the Internet* offers students an accessible guide to important issues in the field. Michael Glassman begins with an overview of the history that traces the evolution of the Internet and its significance for education. He outlines the current state of research, clearly defining terms that students will need to discuss larger concepts, such as hypertext and cyberspace. The second part of the book explores the practical applications of this research, which range from the individual-oriented to the generalized, including massive open online courses (MOOCs), open educational resources, and augmented reality. Key issues that affect teachers and students today, such as Net Neutrality and Creative Commons and Open Source licenses, are explained in straightforward terms, and often-overlooked differences - for example, between course management systems and learning management systems, and between blogs, social networking sites, and short messaging systems - are highlighted.
