[Sustainable Consumer Services](#) Jul 21 2019 The goal for consumer oriented business should be to make a profit and to do it without costing the Earth. Yet exactly how to satisfy the needs and wants of consumers without contributing to environmental degradation is proving to be the essential, but elusive goal for

businesses in the 21st century. The leading solution is to substitute material consumption with the consumption of services that offer consumers convenience and value but eliminate much of the inefficiency and waste associated with our throw-away society. Sustainable consumer services for households - services that are delivered to consumers at the premises such as home delivery of organic food, appliance leasing, mobile laundry services, internet marketing of homeservices or car pool schemes - provide a key part of the answer of how to reduce material consumption and waste while still turning a profit. Yet until now there has been little information to guide the development of such business models and practices, and to develop ways to make service-based consumption more attractive to consumers than object-ownership-based models. This book, equally a practical business handbook and business course text, provides the missing link in sustainable household service competitiveness by examining the issues, looking at business models, providing dozens of real-life best-practice examples and presenting data from the first large-scale consumer survey that explains consumer behaviour and what they want from home service provision. The book is an essential resource for businesses and public or nonprofit organizations and housing organizations entering the growing consumer services market. It provides a wealth of business know-how on what works and what doesn't, how to avoid potential pitfalls, and how to provide consumer services at the household level that are profitable, environmentally sustainable and that add to consumers quality of life.

Contested Images Mar 21 2022 Contested Images: Women of Color in Popular Culture is a collection of 17 essays that analyze representations in popular culture of African American, Asian American, Latina, and Native American women. The anthology is divided into four parts: film images, beauty images, music, and television. The articles share two intellectual traditions: the authors, predominantly women of color, use an intersectionality perspective in their analysis of popular culture and the representation of women of color, and they identify popular culture as a site of conflict and contestation. Instructors will find this collection to be a convenient textbook for women's studies; media studies; race, class, and gender courses; ethnic studies; and more.

Communities in Action Aug 26 2022 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

A New Order of Things Jun 12 2021 Nursing practice changed dramatically in the mid-1960s as experiments across the country demonstrated the effectiveness of nurses' expanded diagnostic and decision-making authority. The result was a new breed of nurse, the nurse practitioner. In A New Order of Things, Freund takes readers through that evolution. Beginning with a demonstration project at the University of North Carolina, leading to the emergence of an innovative nurse practitioner training program, the siting of rural clinics with nurse practitioners as the primary providers of health services, a consortium of nurse practitioner training programs spanning the state, and ultimately to a movement: a new order of advanced nursing practice and primary care service delivery. A New Order of Things is unique in that it documents a history with contemporary relevance, a case study illustrating how a major innovation was strategically engineered toward adoption at the organizational, health system, and state levels. Using multiple sources of historical records and 36 hours of interviews with leaders of the N.C. nurse practitioner movement, Freund illustrates how change leaders formed alliances in a politically nuanced process, thought ahead and of the present moment simultaneously, were adept at recognizing subtle clues and nimble enough to take advantage of opportune moments. This story is N.C.'s story, but it

is far more than that. It is a story for any health professional striving to make change in health services and move an innovative idea into widespread adoption.

Health Tourism Oct 24 2019 In this unique and pathbreaking book, David Reisman examines the relatively new phenomenon of health travel. He presents a multidisciplinary account of the way in which lower costs, shorter waiting times, different services, and the chance to combine recreational tourism with a check-up or an operation all come together to make medical travel a new industry with the potential to create jobs and wealth, while at the same time giving sick people high-quality care at an affordable price. The book illustrates that it is no longer the case that medical attention must be consumed at home. Patients are travelling to Mexico, India and Thailand for a heart bypass. They are going to Hungary, Poland and Malaysia for dentistry. Doctors are migrating to Britain, the USA and Canada for new challenges. Hospitals are opening subsidiaries in Dubai, the Philippines and Costa Rica to see overseas patients on the spot. Integrating academic perspectives from medicine, tourism, health economics, development studies and public policy, the author concludes that the benefits both to the importing and the exporting nations are considerable, but that there are also some costs. He suggests that the new industry should be regulated and supported in order that it can do its best both for the local population and for the sick people who travel abroad for treatment. This fascinating and highly original book will be of great interest to academics and researchers in areas such as health economics, tourism, social policy, development studies, Asian studies and public policy. It will also prove invaluable to practitioners actively involved in planning and delivering medical attention in the global economic order.

A Public Health Perspective on End of Life Care Sep 22 2019 Focusing on population health and discussing studies using different methodologies, this title presents a synthesis and overview of relevant research and empirical data on the end of life that can bear a basis for a more systematic 'public health of the end of life'.

Social Reproduction and the City Nov 24 2019 The transformation of child care after welfare reform in New York City and the struggle against that transformation is a largely untold story. In the decade following welfare reform, despite increases in child care funding, there was little growth in New York's unionized, center-based child care system and no attempt to make this system more responsive to the needs of working mothers. As the city delivered child care services "on the cheap," relying on non-union home child care providers, welfare rights organizations, community legal clinics, child care advocates, low-income community groups,

activist mothers, and labor unions organized to demand fair solutions to the child care crisis that addressed poor single mothers' need for quality, affordable child care as well as child care providers' need for decent work and pay. *Social Reproduction and the City* tells this story, linking welfare reform to feminist research and activism around the "crisis of care," social reproduction, and the neoliberal city. At a theoretical level, Simon Black's history of this era presents a feminist political economy of the urban welfare regime, applying a social reproduction lens to processes of urban neoliberalization and an urban lens to feminist analyses of welfare state restructuring and resistance. Feminist political economy and feminist welfare state scholarship have not focused on the urban as a scale of analysis, and critical approaches to urban neoliberalism often fail to address questions of social reproduction. To address these unexplored areas, Black unpacks the urban as a contested site of welfare state restructuring and examines the escalating crisis in social reproduction. He lays bare the aftermath of the welfare-to-work agenda of the Giuliani administration in New York City on child care and the resistance to policies that deepened race, class, and gender inequities.

Ambient Intelligence Nov 05 2020 This volume contains the proceedings of the Second European Ambient Intelligence (Aml) Conference. The conference took place in Erlangen and Nürnberg, November 19–22, 2008. The concept of ambient intelligence (Aml) was introduced in the late 1990s as a novel paradigm for electronic environments for the years 2010-2020. It builds on the early visions of Weiser describing a novel mobile computing infrastructure integrated into the networked environment of people. According to early definitions, Aml refers to smart electronic surroundings that are sensitive and responsive to the presence of people. The added value for the multi-dimensional society we are living in lies in the fact that the large-scale integration of microelectronics into the environment enables people and objects to interact with this environment in a seamless, trustworthy, and natural manner. Obviously, Aml solutions deliver a new quality of communication and information exchange, they help people to fulfill their professional tasks with increasing efficiency, enable the older generation to stay much longer in the privacy of their own homes and the younger one to lead a healthy and responsible life. Smart mobile devices navigate in private apartments as well as in complex public or industrial environments in order to support people with a broad variety of services.

Dental Hygiene - E-Book Aug 14 2021 Comprehensive and up to date, *Dental Hygiene, 3rd Edition* offers complete coverage of today's dental hygiene skills and theories -- all based on the Human Needs Model for better hygienist/patient communication. With a strong focus on clinical application, each section closely follows the critical thinking and clinical assessment approach that a hygienist must use in the classroom, clinic, and practice. Clinical competencies at the beginning of each chapter provide a clear, quick overview of exactly what you need to know, and procedure boxes with detailed steps and rationales ensure that you understand the reasoning behind each step in the competencies. In addition, new chapters on caries risk assessment and the oral-systemic health connection keep you up to date with today's major areas of research. Each section takes you from

conceptual foundations of dental hygiene through patient assessment, treatment, and evaluation. Scenario boxes challenge you to integrate complex information as you assess, diagnose, plan care, and evaluate the outcome of care. Client Education Issues and Legal, Ethical and Safety Issues boxes inform you of the latest information in these important areas. Critical Thinking exercises provide opportunities for independent thought and problem solving. Tables and boxes build upon and simplify information from the text, making study and review quick and easy. Evolve website contains free online resources, including weblinks, self-assessment quizzes, and professional development worksheets for student review. A reorganized section for Individuals with Special Needs includes chapters on Cleft Palate, Physical Abuse, Blood Diseases, and Mental Illness, all reflecting evidence-based research now available in these areas. New chapters on caries risk assessment and the oral-systemic health connection -- hot topics in today's dental sciences. New anesthesia guidelines keep you up to date with what's new in pain and anxiety control. Essential resources and websites are now included at the end of each chapter for easy reference. New illustrations provide a fresh, reader-friendly design. Self-assessment quizzes are available online, all case-based to follow the NBDH format. Free online access to the Legal and Ethical Decision Making chapter, including an 'asset center' to assist you with clinical skills.

Urban Health Aug 02 2020 This book qualitatively and quantitatively examines the relationships between the constructed environment, health and social vulnerability. It demonstrates that spatial disintegration is often intertwined with health and social inequalities, and therefore a multidisciplinary approach to urban health is essential in order to analyze the impact that psycho-social-environmental factors can have on objective, and perceived health and to investigate the inequalities in healthcare and medical assistance processes. Empirical relationships have been observed between urban environment, social vulnerability and health in different contexts, however there is still a lack of standardized tools that allow us to gain a clear understanding of how health inequalities and daily life are generated. In order to address this issue, a national network of active research groups has been created to draft and develop a prototypical analysis infrastructure to facilitate empirical studies aimed at shedding light on the complex relationships between health disparities, socio-environmental and economic distress, as well as personal

and collective health. Given the interest in achieving meaningful, fair and lasting solutions to health inequalities, and the current lack of an analytical system, there is the need for new multidisciplinary approaches oriented toward the quality of life within an eco-social model of health. Providing an overview of the methodological approaches discussed, this book will appeal to researchers. At the same time it allows those working in local and government social care, healthcare and administrative institutions to gain insights into best practices in urban contexts.

The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

Family Care of Older People in Europe Jun 24 2022 Developing appropriate responses to an ageing population is recognized by policy makers throughout the developed world as a top priority, as is the vital contribution made by family caregivers. However, cultural, demographic and organizational differences between countries have encouraged diverse patterns of response to this common challenge. This book provides a systematic cross-cultural analysis of contemporary patterns and future trends in all major countries of the European Union. Additional interest is provided by including Poland emerging from the post-Communist block as the country at the forefront for joining the European Union. The book should be useful to European policy makers and academics involved in studying the health and social care needs of older people and the capacity, contribution and needs of family caregivers who provide care to older people. The book is also relevant for policy makers and researchers in other countries, mostly in North America and Australia who wish to study European approaches to supporting older people and family caregivers.

An Introduction to Healthcare Organizational Ethics Jul 01 2020 This is a lucid, readable discussion of ethical questions in health care as they arise on the business or organizational level: an effort to spell out an ethical perspective for healthcare organizations. It will be of use to students in health services management programs, health care professionals, healthcare administrators, and members of healthcare ethics committees. Hall begins with the ethical analysis of decision-making in the management of healthcare organizations and then addresses some of the questions of organizational ethics through an analysis of corporate social responsibility in for-profit and not-for-profit organizations and of

the problem of uncompensated care. Later chapters take up patient development, community relations, diversity, employee relations, governmental relations, regulatory compliance and medical records. The author's analysis focuses on healthcare institutions as business organizations with many of the problems faced by corporate management in other fields but with the difference that health care holds a special place among human needs and has traditionally been viewed from an altruistic perspective. He gives special attention to the new standards on organizational ethics promulgated by the Joint Commission on Accreditation of Healthcare Organizations and includes many case studies not only to illustrate the main points but also to direct the reader's attention to peripheral aspects that can complicate these issues.
